Resiliency in Northern Ghana (RING) Project

RING Goals & Objectives

- Poverty and malnutrition reduction
 - 20% reduction in anemia, underweight, stunting, and wasting
 - 80% of households increase income by 100%
- Direct funding & implementation through GOG partners, focusing on strengthening existing systems for sustainable results
 - 17 MMDAs
 - 7 Departments of the NRCC

Addressing Factors that Affect Sustainability

- **Stakeholders**

- Regular feedback solicited & incorporated
- Flexible programming, adaptable to shifting needs
- Substantive engagement of GOG as decision-makers

- **Building on Existing Structures**

- Includes existing structures within GOG, as well as past USAID or other DP programming
- Appreciative inquiry approach
- Institutional memory required (GOG and USAID)

Addressing Factors that Affect Sustainability

- **Host Country Policies**

- Make use of complementary GOG frameworks and priority areas
- Ensure programming is flexible to adapt to shifting priorities

- **External Factors**

- Acknowledge political & environmental constraints & plan for them from the beginning
- Frequent engagement w/ political leadership
- Varied programming that is not solely dependent on weather/changing environments

RING Implementation Approach

- RING activities operate at multiple levels = sustainability occurs at multiple levels
- Critical factors to examine in activity implementation:
 - What level of coordination required?
 - Is the activity truly beneficiary-driven?
 - Does it align with GOG policy?
 - Can the activity be implemented with high quality?

Resiliency in Northern Ghana (RING) Project

RING Sustainability Strategies – Guidance For GOG Partners

- Identify what:
 - Is working
 - GOG partners have truly prioritized
 - Communities have truly prioritized
- Regional support to districts should also be based on MMDA priorities

RING Sustainability Strategies – Guidance For GOG Partners

- Within this overlapping area:

- What is financially feasible?

If not feasible, what can GOG do to make it *more* financially feasible?

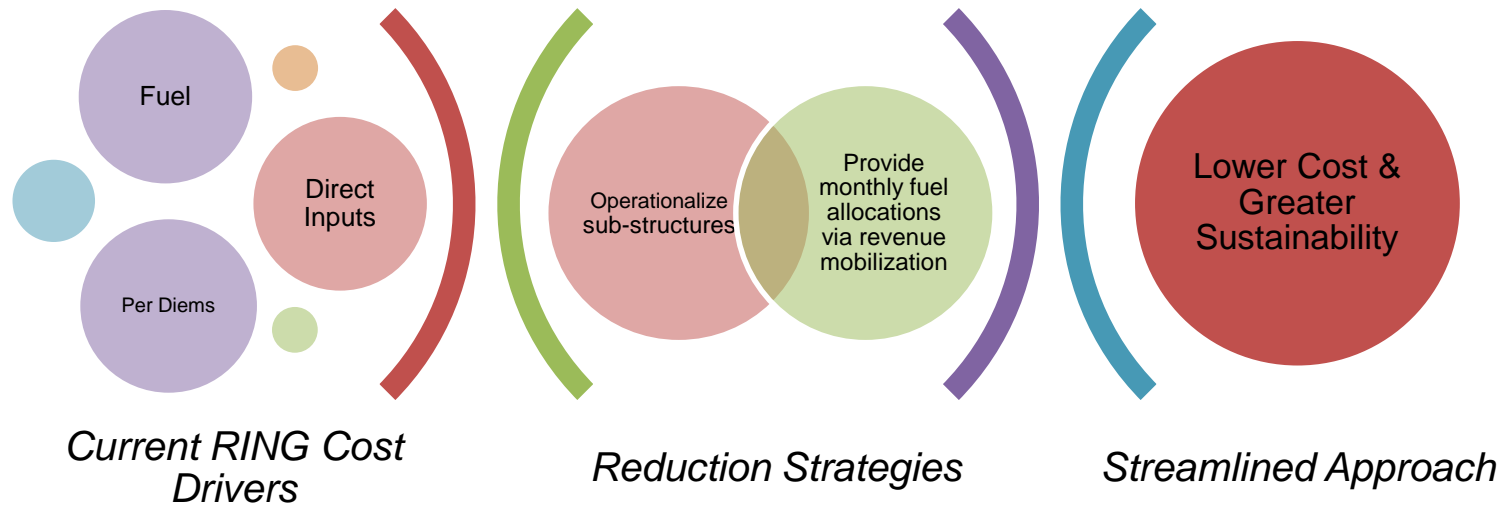

- Can the implementation methodology or level of inputs be reduced?

RING Sustainability Strategies – Guidance For GOG Partners

- Identify cost drivers and determine how best to reduce them

- Be practical about what can be achieved with funding available
- More engagement/oversight by district and regional management required

Strengths

- GOG priority areas – likelihood that many activities (or aspects) will be sustained if....
- Streamlined programming; easier to maintain
- Invigorated MMDAs
- Scale has been achieved in many activities (true impact)

Cheshegu CHPS health worker during ANC, Kumbungu District

Weaknesses

- ...funding is available
- Short duration of program to change long-term systemic challenges
- Balancing ownership and GOG engagement with the required results of a TA contractor

Expectation

- Activities will be maintained as they are (particular expectation by donors)
- Capacity building is a worthwhile investment
- That progress and successes can be maintained at a pace that is achieved under development projects

Reality

- *Some* aspects can be maintained, but level of funding required may be difficult for GOG to sustain
- Turnover and transfers is a killer
- Heavy bureaucracy, strict hierarchy can limit creativity and prevent motivated officers from taking ownership over the implementation of activities

Expectation

- IPs will 'engage effectively with GOG partners'
- Progress under RING is going to effect true (widespread) change
- Programming is integrated and it's working, so it will be maintained

Reality

- 'Engagement' may be more perfunctory in some cases; also a challenge with limited time and number of GOG staff
- Long-term, systemic change is required, especially when working with government partners
- Technical offices tend to work in siloes; integration often project/donor driven, though increase in GOG promotion on the rise
