PREFACE AND ACKNOWLEDGEMENT

No meaningful developmental activity can be undertaken without taking into account the characteristics of the population for whom the activity is targeted. The size of the population and its spatial distribution, growth and change over time, in addition to its socio-economic characteristics are all important in development planning.

A population census is the most important source of data on the size, composition, growth and distribution of a country's population at the national and sub-national levels. Data from the 2010 Population and Housing Census (PHC) will serve as reference for equitable distribution of national resources and government services, including the allocation of government funds among various regions, districts and other sub-national populations to education, health and other social services.

The Ghana Statistical Service (GSS) is delighted to provide data users, especially the Metropolitan, Municipal and District Assemblies, with district-level analytical reports based on the 2010 PHC data to facilitate their planning and decision-making.

The District Analytical Report for the East Mamprusi District is one of the 216 district census reports aimed at making data available to planners and decision makers at the district level. In addition to presenting the district profile, the report discusses the social and economic dimensions of demographic variables and their implications for policy formulation, planning and interventions. The conclusions and recommendations drawn from the district report are expected to serve as a basis for improving the quality of life of Ghanaians through evidence-based decision-making, monitoring and evaluation of developmental goals and intervention programmes.

For ease of accessibility to the census data, the district report and other census reports produced by the GSS will be disseminated widely in both print and electronic formats. The report will also be posted on the GSS website: www.statsghana.gov.gh.

The GSS wishes to express its profound gratitude to the Government of Ghana for providing the required resources for the conduct of the 2010 PHC. While appreciating the contribution of our Development Partners (DPs) towards the successful implementation of the Census, we wish to specifically acknowledge the Department for Foreign Affairs, Trade and Development (DFATD) formerly the Canadian International Development Agency (CIDA) and the Danish International Development Agency (DANIDA) for providing resources for the preparation of all the 216 district reports. Our gratitude also goes to the Metropolitan, Municipal and District Assemblies, the Ministry of Local Government, Consultant Guides, Consultant Editors, Project Steering Committee members and their respective institutions for their invaluable support during the report writing exercise. Finally, we wish to thank all the report writers, including the GSS staff who contributed to the preparation of the reports, for their dedication and diligence in ensuring the timely and successful completion of the district census reports.

Dr. Philomena Nyarko
Government Statistician

EXECUTIVE SUMMARY

Introduction

The district census report is the first of its kind since the first post-independence census was conducted in 1960. The report provides basic information about the district. It gives a brief background of the district, describing its physical features, political and administrative structure, socio-cultural structure and economy. Using data from the 2010 Population and Housing Census (2010 PHC), the report discusses the population characteristics of the district, fertility, mortality, migration, marital status, literacy and education, economic activity status, occupation, employment; Information Communication Technology (ICT), disability, agricultural activities and housing conditions of the district. The key findings of the analysis are as follows (references are to the relevant sections of the report):

Population size, structure and composition

The population of East Mamprusi District, according to the 2010 Population and Housing Census, is 121,009 representing 4.9 percent of the region's total population. Males constitute 49 percent and females represent 51 percent. The district has a rural population of 81,850, representing 67.6 percent. The district has a sex ratio of 96.6. The population of the district is youthful (0-14 years) representing 47.6 percent and depicting a broad base population pyramid which tapers off with a small number of elderly persons (60+ years) (6.3%). The total age dependency ratio for the District is 109.2, the age dependency ratio for males is higher (117.7) than that of females (101.6).

Fertility, mortality and migration

The District has a Total Fertility Rate of 3.6 which is slightly higher than the Regional average of 3.5. The General Fertility Rate is 102.6 births per 1000 women aged 15-49 years and a Crude Birth Rate (CBR) of 23.0 per 1000 population. The crude death rate for the district is 5.9 per 1000. The death rate for males is highest for ages 65-69 years representing 27.1 deaths per 1000 population while for the females, the highest death rate of 20 deaths per 1000 population is for age 70+ years. Majority of migrants (65.3%) living in the district were born elsewhere in the Northern region, while those born in another region constitute 28.8 percent. For migrants born in another region, those born in Upper East constitute 53.0 percent followed by Ashanti with 21.9 percent and Brong Ahafo, 6.9 percent.

Household size, composition and structure

The district has a household population of 119,596 with a total number of 13,895 households. The average household size in the district is 8.6 persons per household. Children constitute the largest proportion of the household composition accounting for 51.5 percent. Spouses form about 9.2 percent. Extended (Heads, spouse(s), children and Head's relatives) households constitute 62.8 percent of the total number of households in the district.

Marital status

A little above half (57.4%) of the population aged 12 years and older are married, 36.6 percent have never married, 0.6 percent are in consensual unions, 3.7 percent are widowed, 0.8 percent are divorced and 0.9 percent are separated. By age 25-29 years, four out of five of the females (84.8%) are married compared to a little above half of males (59.1%). At age 65 and above, widowed females account for as high as 43.5 percent while widowed males

account for only 4.7 percent. Among the married, 83.1 percent have no education while about 41.3 percent of the never married have never been to school. About 8 in 10 of the married population (82.2%) are employed, 2.1 percent are unemployed and 15.8 percent are economically not active. A greater proportion of those who have never married (58.3%) are employed with 2.0 percent unemployed.

Nationality

The proportion of Ghanaians by birth in the district is 92.8 percent. Those who have naturalized constitute 1.4 percent and the non-Ghanaian population in the district is 2.8 percent.

Literacy and education

Of the population 11 years and above, 33.0 percent are literate and 67.0 percent are non-literate. The proportion of literate males is higher (39.0 %) than that of females (27.5%). About 46.7 percent indicated they could speak and write both English and Ghanaian languages. Of the population aged 3 years and above (37,685) in the district, 57.7 percent has never attended school, 34.4 percent are currently attending and 7.9 percent have attended in the past.

Economic activity status

About 76.8 percent of the population aged 15 years and older are economically active while 23.2 per cent are economically not active. Of the economically active population, 97.0 percent are employed while 3.0 percent are unemployed. For those who are economically not active, a larger percentage of them are students (38.0%), 29.2 percent perform household duties and 5.4 percent are disabled or too sick to work. Four out of ten (44.3%) unemployed are seeking work for the first time.

Occupation

Of the employed population, about 84.4 percent are engaged as skilled agricultural, forestry and fishery workers, 7.1 percent service and sales workers, 3.9 percent in craft and related trade, and 2.4 percent are engaged as managers, professionals, and technicians.

Employment status and sector

Of the population 15 years and older 47.8 percent are self-employed without employees, 44.7 percent are contributing family workers, 0.6 percent are casual workers and 0.8 percent are domestic employees (house helps). The private informal sector is the largest employer in the district, employing 96.0 percent of the population followed by the public sector with 2.2 percent.

Information Communication Technology

Of the population 12 years and above, 14 percent have mobile phones. Among the men, those who own mobile phones constitute 18.3 percent as compared to 9.8 percent of females. Less than one percent (0.8%) of the population 12 years and older use internet facilities in the district. Only 192 households representing 1.4 percent of the total households in the district have desktop/laptop computers.

Disability

About 2.8 percent of the district's total population has one form of disability or the other. The proportion of the male population with disability is slightly higher (3.0%) than females

(2.7%). The types of disability in the district include sight, hearing, speech, physical, intellect, and emotion. Persons with emotional disability recorded the highest of 30.4 percent followed by sight disability (26.7%). There are more males with sight and physical disabilities than females in both the urban and rural localities. Of the population disabled, 72.4 percent have never been to school.

Agriculture

Nine out of ten (90.6%) households in the district are engaged in agriculture. In the rural localities, 97.4 percent of the households are agricultural households while in the urban localities, 78.7 percent of households are into agriculture. Most households in the district (97.3%) are involved in crop farming. Goat is the dominant animal reared in the district.

Housing

The housing stock of East Mamprusi District is 10,625 representing 4.1 percent of the total number of houses in the Northern Region. The average number of persons per house is 11.3.

Type, tenancy arrangement and ownership of dwelling units

About three-quarters (72.3%) of all dwelling units in the district are compound houses; 12.1 percent are separate houses and 3.3 percent are semi-detached houses. About nine out of ten (93.8%) dwelling units in the district are owned by members of the household; 1.8 percent are owned by private individuals; 2.3 percent are owned by a relative who is not a member of the household and only 1.5 percent are owned by public or government. Less than one percent (0.3%) of the dwelling units is owned through mortgage schemes.

Material for construction of outer wall, floor and roof

The main construction material for outer walls of dwelling units in the district is mud/mud bricks or earth accounting for 90.6 percent with cement/concrete constituting 2.7 percent of outer walls of dwelling units in the district. Cement (73.1%) and mud/earth (25.3%) are the two main materials used in the construction of floors of dwelling units in the district. Metal sheets (49.5%) and Thatch/Palm leaf or raffia (43.0%) are the two main roofing materials for dwelling units in the district.

Room occupancy

Three rooms constitute the highest percentage (21.1%) of sleeping rooms occupied by households in housing units in the district. About 10 percent of households with 10 or more members occupy three rooms.

Utilities and household facilities

The three main sources of lighting in dwelling units in the district are kerosene lamp (42.6%), electricity (38.7%) and flashlight/torch (15.0%). The main source of fuel for cooking for most households in the district is wood (86.1%). The proportion for rural (95.8%) is higher than that of urban (69.2%). The four main sources of water in the district are borehole, river/stream, protected well and unprotected wells. A little above a quarter of households (36.8%) drink water from boreholes.

An overwhelming proportion of households do not have toilet facilities representing 86.0 percent, followed by households using Public toilet (WC/KVIP/Pit pan etc.) (5.8%). A third of households (36.3%) in the district own bathrooms for exclusive use by household members and another 30.1 percent share separate bathrooms in the same house.

Waste disposal

The most widely method of solid waste disposal is by public dump in the open space accounting for 37.9 percent. About a third of households (30.4%) dump their solid waste indiscriminately. House to house waste collection accounts for 5.8 percent. For liquid waste disposal, throwing waste onto the street/outside (71.1%) and onto the compound (14.0%) are the two most common methods used by households in the district.

CHAPTER ONE

INTRODUCTION

1.1 Background

The East Mamprusi District (EMD) was established by Legislative Instrument (LI) 1776 (2004) with the capital located at Gambaga. Gambaga is a historic town lying next to the seat of the Nayiri, king of Mamprugu, and also the first headquarters of the Northern Territories. It is one of the oldest districts in the Northern Region. Out of it, the West Mamprusi District was carved in 1988. In 2004, the Bunkpurugu-Yunyoo District was also created to promote developments. It therefore served as the parent District for West Mamprusi and Bunkpurugu - Yunyoo Districts.

1.2 Physical Features

1.2.1 Location and size

The East Mamprusi District is located in the north-eastern part of the Northern Region. To the north, it shares boundaries with Talensi and Nabdam Districts, Bawku West and Garu-Tempene Districts, all in the Upper East Region and to the east is the Bunkpurugu-Yunyoo District. It is bordered in the west by the West Mamprusi District and to the south by the Gusheigu and Karaga Districts. It covers a land mass of 1,706.8 square kilometers, representing about 2.2 percent of the total land mass of the region.

1.2.2 Climate

The District lies in the tropical continental western margin and characterized by a single rainfall pattern brought in by the rain bearing tropical maritime air mass (MT). This occurs between April and October every year. This is followed by the tropical continental air mass (CT) which brings about the dry season (Harmattan) and occurs from late November to March. The mean annual rainfall is between 1000mm to 1500mm with the peak occurring from July to September. The District experiences a prolonged dry season with the peak occurring between March and April.

Temperature is fairly high with the annual mean temperature ranging from 27.4°C to 35°C depending on the season. The highest temperature is recorded in the dry season while the lowest is experienced during the Harmattan season.

1.2.3 Vegetation

The District lies within the interior woodland savannah belt and has Common grass vegetation with trees like dawadawa, baobab, sheanut, etc. Grasses grow in tussocks and can reach a height of 3 metres or more. There is marked change in the vegetation depending on the two prevailing climatic conditions. During the rainy season, animals graze on the grasses which serve as feed for them and hence lessen the burden of animal owners in finding feed for them. Shea tree is of great economic value for the women who pick the nuts and process it into shea butter.

Figure 1.1: Map of East Mamprusi District

Source: Ghana Statistical Service, Population and Housing Census

1.2.4 Relief and drainage

The land is generally slightly undulating with the Gambaga escarpment marking the Northern limits of the Voltain Sandstone basin. Apart from the mountainous areas bordering the escarpment, there is also little runoff when it rains. There are different types of rock formation given the different relief features, which range from flat bottom valleys to steep-sided highlands. The upper half of the District is underlined by the middle Voltain formation consisting of shale, mudstone, iron pans and sandstone.

The District has good water drainage basin. The White Volta, which enters the region in the northeast is joined by the Red Volta near Gambaga, The Nawong and Moba rivers are major perennial rivers in the District.

1.2.5 Soil and their suitability for agriculture

There are two major soil types in the District. These are the Savannah Ochrosols and Groundwater Laterites. The Savannah Ochrosols which covers almost the entire District, is moderately drained and the upland soils developed mainly on Voltain sandstone. The texture of the surface soil is sandy to sandy loam with fairly good water retention. The Groundwater Laterite covers a smaller portion of the District and is mainly found in the southern part of the District. These are concretionary soils developed mainly from Voltain shale, mudstone and argillaceous sandstone materials. The texture of the soil is sandy loam which is suitable for the cultivation of annual food crops such as maize, millet, sorghum, watermelon etc and tree crops with long gestation period such as sheanut, dawadawa, cashew etc which are of economic importance.

1.3 Political and Administrative Structure

The East Mamprusi District is by law, the highest political, administrative and planning authority with deliberative, legislative and executive powers. The District has two Town Councils, (Nalerigu, Gambaga) 3 Area Councils (Langbinsi, Sakogu and Gbintri) and 36 Unit Committees. The District Assembly has 36 elected members, 15 Government appointees, one Member of Parliament, and a District Chief Executive (DCE) who is the executive and administrative head of the District. He/she is assisted by the District Co-ordinating Director and his technical team as the technocrats and advisers of the DCE.

1.4 Cultural and Social Structure

1.4.1 Chieftaincy

The Nayiri is the King (overlord) of Mamprugu traditional area and has council of elders who advise him. The Nayiri is supported by paramount chiefs, Divisional and other sub-chiefs under him. His paramountcies extend beyond the boundaries of the District and are located in other Regions and Districts. Notable among the chiefs are the Wulugu Naaba, Wungu Naaba, Soo Naaba, Kulgu Naaba etc (all in the West Mamprusi District); Yunyoorana and Bunkpurugu Naaba (in the Bunkpurugu Yunyoo District) and Zuarungu Naaba, Tongu Naaba, Sakuti etc (all in Upper East Region).

1.4.2 Language, culture and ethnicity

Mamprusis are the major ethnic group in the District. However, there are also Bimobas, Konkombas, Talensis, Moshis, Chokosis and Hausas who have settled at the eastern part of the District. The people of East Mamprusi District celebrate a number of festivals. These

include Damba festival, Bugum (fire) festival and others. The District is a multi-religious one; the dominant religions are Islam, Christianity and Traditional religion.

1.5 Economy

The East Mamprusi District is richly endowed with human and natural resources particularly tourists attraction sites such as the Naa Djerenga Walls (which was built without water but only milk and honey in Nalerigu) , the Gambaga Witches Camp, the Moshe chiefs ancestry grave sites in Gambaga etc. The District has three functional markets at Gbintiriu, Nalerigu and Langbinsi which serve as sources of revenue for the District Assembly. The main means of transportation for the people are motor bikes, bicycles as well as commercial vehicles.

1.6 Census Methodology, Concepts and Definitions

1.6.1 Introduction

Ghana Statistical Service (GSS) was guided by the principle of international comparability and the need to obtain accurate information in the 2010 Population and Housing Census (2010 PHC). The Census was, therefore, conducted using all the essential features of a modern census as contained in the United Nations Principles and Recommendations for countries taking part in the 2010 Round of Population and Housing Censuses.

Experience from previous post independence censuses of Ghana (1960, 1970, 1984 and 2000) was taken into consideration in developing the methodologies for conducting the 2010 PHC. The primary objective of the 2010 PHC was to provide information on the number, distribution and social, economic and demographic characteristics of the population of Ghana necessary to facilitate the socio-economic development of the country.

1.6.2 Pre-enumeration activities

Development of census project document and work plans

A large scale statistical operation, such as the 2010 Population and Housing Census required meticulous planning for its successful implementation. A working group of the Ghana Statistical Service prepared the census project document with the assistance of two consultants. The document contains the rationale and objectives of the census, census organisation, a work plan as well as a budget. The project document was launched in November 2008 as part of the Ghana Statistics Development Plan (GSDP) and reviewed in November 2009.

Census secretariat and committees

A well-structured management and supervisory framework that outlines the responsibilities of the various stakeholders is essential for the effective implementation of a population and housing census. To implement the 2010 PHC, a National Census Secretariat was set up in January 2008 and comprised professional and technical staff of GSS as well as staff of other Ministries, Departments and Agencies (MDAs) seconded to GSS. The Census Secretariat was primarily responsible for the day-to-day planning and implementation of the census activities. The Secretariat had seven units, namely; census administration, cartography, recruitment and training, publicity and education, field operations and logistics management, data processing, and data analysis and dissemination.

The Census Secretariat was initially headed by an acting Census Coordinator engaged by the United Nations Population Fund (UNFPA) in 2008 to support GSS in the planning of the

Census. In 2009, the Census Secretariat was re-organised with the Government Statistician as the National Chief Census Officer and overall Coordinator, assisted by a Census Management Team and a Census Coordinating Team. The Census Management Team had oversight responsibility for the implementation of the Census. It also had the responsibility of taking critical decisions on the census in consultation with other national committees. The Census Coordinating Team, on the other hand, was responsible for the day-to-day implementation of the Census programme.

A number of census committees were also set up at both national and sub-national levels to provide guidance and assistance with respect to resource mobilization and technical advice. At the national level, the committees were the National Census Steering Committee (NCSC), the National Census Technical Advisory Committee (NCTAC) and the National Census Publicity and Education Committee (NCPEC). At the regional and district levels, the committees were the Regional Census Implementation Committee and the District Census Implementation Committee, respectively.

The Regional and District Census Implementation Committees were inter-sectoral in their composition. Members of the Committees were mainly from decentralized departments with the Regional and District Coordinating Directors chairing the Regional Census Implementation Committee and District Census Implementation Committee, respectively. The Committees contributed to the planning of district, community and locality level activities in areas of publicity and field operations. They supported the Regional and District Census Officers in the recruitment and training of field personnel (enumerators and supervisors), as well as mobilizing logistical support for the census.

Selection of census topics

The topics selected for the 2010 Population and Housing Census were based on recommendations contained in the UN Principles and Recommendations for 2010 Round of Population and Housing Censuses and the African Addendum to that document as well as the needs of data users. All the core topics recommended at the global level, i.e., geographical and internal migration characteristics, international migration, household characteristics, demographic and social characteristics such as age, date of birth, sex, and marital status, fertility and mortality, educational and economic characteristics, issues relating to disability and housing conditions and amenities were included in the census.

Some topics that were not considered core by the UN recommendations but which were found to be of great interest and importance to Ghana and were, therefore, included in the 2010 PHC are religion, ethnicity, employment sector and place of work, agricultural activity, as well as housing topics, such as, type of dwelling, materials for outer wall, floor and roof, tenure/holding arrangement, number of sleeping rooms, cooking fuel, cooking space and Information Communication Technology (ICT).

Census mapping

A timely and well implemented census mapping is pivotal to the success of any population and housing census. Mapping delineates the country into enumeration areas to facilitate smooth enumeration of the population. The updating of the 2000 Census Enumeration Area (EA) maps started in the last quarter of 2007 with the acquisition of topographic sheets of all indices from the Survey and Mapping Division of the Lands Commission. In addition, digital sheets were also procured for the Geographical Information System Unit.

The Cartography Unit of the Census Secretariat collaborated with the Survey and Mapping Division of the Lands Commission and the Centre for Remote Sensing and Geographic Information Services (CERSGIS) of the Department of Geography and Resource Development, University of Ghana, to determine the viability of migrating from analog to digital mapping for the 2010 PHC, as recommended in the 2000 PHC Administrative Report. Field cartographic work started in March 2008 and was completed in February 2010.

Development of questionnaire and manuals

For effective data collection, there is the need to design appropriate documents to solicit the required information from respondents. GSS consulted widely with main data users in the process of the questionnaire development. Data users including MDAs, research institutions, civil society organizations and development partners were given the opportunity to indicate the type of questions they wanted to be included in the census questionnaire.

Documents developed for the census included the questionnaire and manuals, and field operation documents. The field operation documents included Enumerator's Visitation Record Book, Supervisor's Record Book, and other operational control forms. These record books served as operational and quality control tools to assist enumerators and supervisors to control and monitor their field duties respectively.

Pre-tests and trial census

It is internationally recognized that an essential element in census planning is the pre-testing of the questionnaire and related instructions. The objective of the pre-test is to test the questionnaire, the definition of its concepts and the instructions for filling out the questionnaire.

The census questionnaire was pre-tested twice in the course of its development. The first pre-test was carried out in March 2009 to find out the suitability of the questions and the instructions provided. It also tested the adequacy and completeness of the responses and how respondents understood the questions. The second pre-test was done in 10 selected enumeration areas in August, 2009. The objective of the second pre-test was to examine the sequence of the questions, test the new questions, such as, date of birth and migration, and assess how the introduction of 'date of birth' could help to reduce 'age heaping'. With regard to questions on fertility, the pre-tests sought to find out the difference, if any, between proxy responses and responses by the respondents themselves. Both pre-tests were carried in the Greater Accra Region. Experience from the pre-tests was used to improve the final census questionnaire.

A trial census which is a dress rehearsal of all the activities and procedures that are planned for the main census was carried out in October/November 2009. These included recruitment and training, distribution of census materials, administration of the questionnaire and other census forms, enumeration of the various categories of the population (household, institutional and floating population), and data processing. The trial census was held in six selected districts across the country namely; Saboba (Northern Region), Chereponi (Northern Region), Sene (Brong Ahafo Region), Bia (Western Region), Awutu Senya (Central Region), and Osu Klottey Sub-Metro (Greater Accra Region). A number of factors were considered in selecting the trial census districts. These included: administrative boundary issues, ecological zone, and accessibility, enumeration of floating population/outdoor-sleepers, fast growing areas, institutional population, and enumeration areas with scattered settlements.

The trial census provided GSS with an opportunity to assess its plans and procedures as well as the state of preparedness for the conduct of the 2010 PHC. The common errors found during editing of the completed questionnaires resulted in modifications to the census questionnaire, enumerator manuals and other documents. The results of the trial census assisted GSS to arrive at technically sound decisions on the ideal number of persons per questionnaire, number of persons in the household roster, migration questions, placement of the mortality question, serial numbering of houses/housing structures and method of collection of information on community facilities. Lessons learnt from the trial census also guided the planning of the recruitment process, the procedures for training of census field staff and the publicity and education interventions.

1.6.3 Census enumeration

Method of enumeration and field work

All post- independence censuses (1960, 1970, 1984, and 2000) conducted in Ghana used the de facto method of enumeration where people are enumerated at where they were on census night and not where they usually reside. The same method was adopted for the 2010 PHC. The de facto count is preferred because it provides a simple and straight forward way of counting the population since it is based on a physical fact of presence and can hardly be misinterpreted. It is thought that the method also minimizes the risks of under-enumeration and over enumeration. The canvasser method, which involves trained field personnel visiting houses and households identified in their respective enumeration areas, was adopted for the 2010 PHC.

The main census enumeration involved the canvassing of all categories of the population by trained enumerators, using questionnaires prepared and tested during the pre-enumeration phase. Specific arrangements were made for the coverage of special population groups, such as the homeless and the floating population. The fieldwork began on 21st September 2010 with the identification of EA boundaries, listing of structures, enumeration of institutional population and floating population.

The week preceding the Census Night was used by field personnel to list houses and other structures in their enumeration areas. Enumerators were also mobilized to enumerate residents/inmates of institutions, such as, schools and prisons. They returned to the institutions during the enumeration period to reconcile the information they obtained from individuals and also to cross out names of those who were absent from the institutions on Census Night.

Out-door sleepers (floating population) were also enumerated on the Census Night.

Enumeration of the household population started on Monday, 27th September, 2010. Enumerators visited houses, compounds and structures in their enumeration areas and started enumerating all households including visitors who spent the Census Night in the households. Enumeration was carried out in the order in which houses/structures were listed and where the members of the household were absent, the enumerator left a call-back-card indicating when he/she would come back to enumerate the household. The enumeration process took off smoothly with enumerators poised on completing their assignments on schedule since many of them were teachers and had to return to school. However, many enumerators ran short of questionnaires after a few days' work.

Enumeration resumed in all districts when the questionnaire shortage was resolved and by 17th October, 2010, enumeration was completed in most districts. Enumerators who had

finished their work were mobilized to assist in the enumeration of localities that were yet to be enumerated in some regional capitals and other fast growing areas. Flooded areas and other inaccessible localities were also enumerated after the end of the official enumeration period. Because some enumeration areas in fast growing cities and towns, such as, Accra Metropolitan Area, Kumasi, Kasafo and Techiman were not properly demarcated and some were characterized by large EAs, some enumerators were unable to complete their assigned tasks within the stipulated time.

1.6.4 Post enumeration survey

In line with United Nations recommendations, GSS conducted a Post Enumeration Survey (PES) in April, 2011 to check content and coverage error. The PES was also to serve as an important tool in providing feedback regarding operational matters such as concepts and procedures in order to help improve future census operations. The PES field work was carried out for 21 days in April 2011 and was closely monitored and supervised to ensure quality output. The main findings of the PES were that:

- 97.0 percent of all household residents who were in the country on Census Night (26th September, 2010) were enumerated.
- 1.3 percent of the population was erroneously included in the census.
- Regional differentials are observed. Upper East region recorded the highest coverage rate of 98.2 percent while the Volta region had the lowest coverage rate of 95.7 percent.
- Males (3.3%) were more likely than females (2.8%) to be omitted in the census. The coverage rate for males was 96.7 percent and the coverage rate for females was 97.2 percent. Also, the coverage rates (94.1%) for those within the 20-29 and 30-39 age groups are relatively lower compared to the coverage rates of the other age groups.
- There was a high rate of agreement between the 2010 PHC data and the PES data for sex (98.8%), marital status (94.6%), relationship to head of household (90.5%) and age (83.0%).

1.6.5 Release and dissemination of results

The provisional results of the census were released in February 2011 and the final results in May 2012. A National Analytical report, six thematic reports, a Census Atlas, 10 Regional Reports and a report on Demographic, Social, Economic and Housing were prepared and disseminated in 2013.

1.6.6 Concepts and definitions

Introduction

The 2010 Population and Housing Census of Ghana followed the essential concepts and definitions of a modern Population and Housing Census as recommended by the United Nations (UN). It is important that the concepts, definitions and recommendations are adhered to since they form the basis upon which Ghana could compare her data with that of other countries.

The concepts and definitions in this report cover all sections of the 2010 Population and Housing Census questionnaires (PHC1A and PHC1B). The sections were: geographical

location of the population, household and non-household population, literacy and education, emigration, demographic and economic characteristics, disability, information communication technology (ICT), fertility, mortality, agricultural activity and housing conditions.

The concepts and definitions are provided to facilitate understanding and use of the data presented in this report. Users are therefore advised to use the results of the census within the context of these concepts and definitions.

Region

There were ten (10) administrative regions in Ghana during the 2010 Population and Housing Census as they were in 1984 and 2000.

District

In 1988, Ghana changed from the local authority system of administration to the District assembly system. In that year, the then existing 140 local authorities were demarcated into 110 districts. In 2004, 28 new districts were created; this increased the number of districts in the country to 138. In 2008, 32 additional districts were created bringing the total number of districts to 170. The 2010 Population and Housing Census was conducted in these 170 administrative districts (these are made-up of 164 districts/municipals and 6 metropolitan areas). In 2012, 46 new districts were created to bring the total number of districts to 216. There was urgent need for data for the 46 newly created districts for planning and decision-making. To meet this demand, the 2010 Census data was re-programmed into 216 districts after carrying out additional fieldwork and consultations with stakeholders in the Districts affected by the creation of the new districts.

Locality

A locality was defined as a distinct population cluster (also designated as inhabited place, populated centre, settlement) which has a NAME or LOCALLY RECOGNISED STATUS. It included fishing hamlets, mining camps, ranches, farms, market towns, villages, towns, cities and many other types of population clusters, which meet the above criteria. There were two main types of localities, rural and urban. As in previous censuses, the classification of localities into 'urban' and 'rural' was based on population size. Localities with 5,000 or more persons were classified as urban while localities with less than 5,000 persons were classified as rural.

Population

The 2010 Census was a "de facto" count and each person present in Ghana, irrespective of nationality, was enumerated at the place where he/she spent the midnight of 26th September 2010.

Household

A household was defined as a person or a group of persons, who lived together in the same house or compound and shared the same house-keeping arrangements. In general, a household consisted of a man, his wife, children and some other relatives or a house help who may be living with them. However, it is important to remember that members of a household are not necessarily related (by blood or marriage) because non-relatives (e.g. house helps) may form part of a household.

Head of Household

The household head was defined as a male or female member of the household recognised as such by the other household members. The head of household is generally the person who has economic and social responsibility for the household. All relationships are defined with reference to the head.

Household and non-household population

Household population comprised of all persons who spent the census night in a household setting. All persons who did not spend the census night in a household setting (except otherwise stated) were classified as non-household population. Persons who spent census night in any of the under listed institutions and locations were classified as non-household population:

- a) Educational Institutions
- b) Children's and old people's homes
- c) Hospitals and healing centres
- d) Hotels
- e) Prisons
- f) Service barracks
- g) Soldiers on field exercise
- h) Floating Population: The following are examples of persons in this category:
 - i. All persons who slept in lorry parks, markets, in front of stores and offices, public bathrooms, petrol filling stations, railway stations, verandas, pavements, and all such places which are not houses or compounds.
 - ii. Hunting and fishing camps.
 - iii. Beggars and vagrants (mentally sick or otherwise).

Age

The age of every person was recorded in completed years disregarding fractions of days and months. For those persons who did not know their birthdays, the enumerator estimated their ages using a list of district, regional and national historical events.

Nationality

Nationality is defined as the country to which a person belongs. A distinction is made between Ghanaians and other nationals. Ghanaian nationals are grouped into Ghanaian by birth, Ghanaian with dual nationality and Ghanaian by naturalization. Other nationals are grouped into ECOWAS nationals, Africans other than ECOWAS nationals, and non-Africans.

Ethnicity

Ethnicity refers to the ethnic group that a person belonged to. This information is collected only from Ghanaians by birth and Ghanaians with dual nationality. The classification of

ethnic groups in Ghana is that officially provided by the Bureau of Ghana Languages and which has been in use since the 1960 census.

Birthplace

The birthplace of a person refers to the locality of usual residence of the mother at the time of birth. If after delivery a mother stayed outside her locality of usual residence for six months or more or had the intention of staying in the new place for six or more months, then the actual town/village of physical birth becomes the birthplace of the child.

Duration of residence

Duration of residence refers to the number of years a person has lived in a particular place. This question is only asked of persons not born in the place where enumeration took place. Breaks in duration of residence lasting less than 12 months are disregarded. The duration of residence of persons who made multiple movements of one (1) year or more is assumed to be the number of years lived in the locality (town or village) since the last movement.

Religion

Religion refers to the individual's religious affiliation as reported by the respondent, irrespective of the religion of the household head or the head's spouse or the name of the person. No attempt was made to find out if respondents actually practiced the faith they professed.

Marital status

Marital status refers to the respondent's marital status as at Census Night. The question on marital status was asked only of persons 12 years and older. The selection of the age limit of 12 years was based on the average age at menarche and also on the practice in some parts of the country where girls as young as 12 years old could be given in marriage.

Literacy

The question on literacy referred to the respondent's ability to read and write in any language. A person was considered literate if he/she could read and write a simple statement with understanding. The question on literacy was asked only of persons 11 years and older.

Education

School Attendance

Data was collected on school attendance for all persons three (3) years and older. School attendance refers to whether a person has ever attended, was currently attending or has never attended school. In the census, school meant an educational institution where a person received at least four hours of formal education.

Although the lower age limit of formal education is six years for primary one, eligibility for the school attendance question was lowered to three years because pre-school education has become an important phenomenon in the country.

Level of education

Level of education refers to the highest level of formal school that a person ever attended or was attending. This information was obtained for persons 3 years and older.

Activity status

Activity status refers to economic or non-economic activity of respondents during the 7 days preceding census night. Information on type of activity was collected on persons 5 years and older. A person was regarded as economically active if he/she:

- a. Worked for pay or profit or family gain for at least 1 hour within the 7 days preceding census night. This included persons who were in paid employment or self-employment or contributing family workers.
- b. Did not work, but had jobs to return to.
- c. Were unemployed.

The economically not active were persons who did not work and were not seeking for work. They were classified by reasons for not being economically active. Economically not active persons included homemakers, students, retired persons, the disabled and persons who were unable to work due to their age or ill-health.

Occupation

This referred to the type of work the person was engaged in at the establishment where he/she worked. This was asked only of persons 5 years and older who worked 7 days before the census night, and those who did not work but had a job to return to as well as those unemployed who had worked before. All persons who worked during the 7 days before the census night were classified by the kind of work they were engaged in. The emphasis was on the work the person did during the reference period and not what he/she was trained to do. For those who did not work but had a job to return to, their occupation was the job they would go back to after the period of absence. Also, for persons who had worked before and were seeking for work and available for work, their occupation was on the last work they did before becoming unemployed. If a person was engaged in more than one occupation, only the main one was considered.

Industry

Industry referred to the type of product produced or service rendered at the respondent's work place. Information was collected only on the main product produced or service rendered in the establishment during the reference period.

Employment status

Employment status refers to the status of a person in the establishment where he/she currently works or previously worked. Eight employment status categories were provided: employee, self-employed without employees, self-employed with employees, casual worker, contributing family worker, apprentice, domestic employee (house help). Persons who could not be classified under any of the above categories were classified as "other".

Employment sector

This refers to the sector in which a person worked. The employment sectors covered in the census were public, private formal, private informal, semi-public/parastatal, NGOs and international organizations.

Disability

Persons with disability were defined as those who were unable to or were restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation. Information was collected on persons with visual/sight

impairment, hearing impairment, mental retardation, emotional or behavioural disorders and other physical challenges.

Information communication technology (ICT)

ICT questions were asked for both individuals and households. Persons having mobile phones refer to respondents 12 years and older who owned mobile phones (irrespective of the number of mobile phones owned by each person). Persons using internet facility refers to those who had access to internet facility at home, internet cafe, on mobile phone or other mobile device. Internet access is assumed to be not only via computer, but also by mobile phones, PDA, game machine and digital television.

Households having Personal Computers/Laptops refer to households who own desktops/laptop computers. The fixed telephone line refers to a telephone line connecting a customer's terminal equipment (e.g. telephone set, facsimile machine) to the public switch telephone network.

Fertility

Two types of fertility data were collected: lifetime fertility and current fertility. Lifetime fertility refers to the total number of live births that females 12 years and older had ever had during their life time. Current fertility refers to the number of live births that females 12-54 years old had in the 12 months preceding the Census Night.

Mortality

Mortality refers to all deaths that occurred in the household during the 12 months preceding the Census Night. The report presents information on deaths due to accidents, violence, homicide and suicide. In addition, data were collected on pregnancy-related deaths of females 12-54 years.

Agriculture

The census sought information on household members who are engaged in agricultural activities, including the cultivation of crops or tree planting, rearing of livestock or breeding of fish for sale or family consumption. Information was also collected on their farms, types of crops and number and type of livestock.

Housing conditions and facilities

The UN recommended definition of a house as "a structurally separate and independent place of abode such that a person or group of persons can isolate themselves from the hazards of climate such as storms and the sun" was adopted. The definition, therefore, covered any type of shelter used as living quarters, such as separate houses, semi-detached houses, flats/apartments, compound houses, huts, tents, kiosks and containers.

Living quarters or dwelling units refer to a specific area or space occupied by a particular household and therefore need not necessarily be the same as the house of which the dwelling unit may be a part.

Information collected on housing conditions included the type of dwelling unit, main construction materials for walls, floor and roof, holding/tenure arrangement, ownership type, type of lighting, source of water supply and toilet facilities. Data was also collected on method of disposal of solid and liquid waste.

1.7 Organization of the Report

The report is organized into nine (9) chapters. Chapter one discusses the profile of EMD. This encompasses physical features, political administration, social and cultural structure, economy, organization of report and concepts and definitions.

Chapter two considers the demographic characteristics of the District such as population size and distribution, age-sex structure, migration, fertility and mortality.

Chapter three explains the social characteristics which include household size, household composition and headship, marital status, nationality, religious affiliation, literacy and education.

Again, chapter four looks at the economic characteristics of the District such as economic activities, occupation, industry, and employment status and employment sector.

Chapter five presents distribution of Information Communication Technology (ICT) in the District. These includes ownership of mobile phones, use of internet, household ownership of fixed telephone lines and household ownership of desktop or laptop computer in the District.

Chapter six also discusses disability in the District. The issues considered include population with disability, type of disability, distribution by type of locality, disability and activity and disability, education and literacy.

Seventh chapter covers agricultural activities. These include households in agriculture and types of farming.

Housing conditions in the District are discussed in chapter eight. These are housing stock, type of dwelling, holding and tenancy arrangement, construction materials, room occupancy, access to utilities and household facilities, source of drinking water and for domestic use, bathing and toilet facilities as well as methods of waste disposal.

Chapter nine discusses the findings and conclusions drawn from the preceding chapters.

CHAPTER TWO

DEMOGRAPHIC CHARACTERISTICS

2.1 Introduction

Generally, population size, age and sex composition/distribution of every society have varied implications for development planning as far as socio-economic indicators such as health, education, transportation and overall welfare of the people are concerned. The objective of this chapter is to analyze the size, composition, age and sex structure of the population of EMD as captured by the 2010 PHC.

2.2 Population Size and Distribution

Table 2.1 looks at the age and sex composition of the population of East Mamprusi District (EMD) as well as locality types. The 2010 PHC show that the District total population is 121,009 with 49 percent males and 51 percent females. A large number of the population 81,850 resides in the rural parts of the District with the remaining 39,159 in the urban areas.

2.3 Age-Sex Structure

The EMD has a youthful population structure with a broad base consisting of large numbers of children and a conical top of a small number of elderly persons (Figure 2.1). It is important to note that the population decreases with advancing age as in ages 0 to 59 years. The numbers however fluctuate from 59 to 69 years and assume a stable but decreasing pattern with advancing age. It is also worthy of note that among the age group (0-19 years), the male population dominate the females. However, the reverse is the case from 20-99 years. This may be due to high levels of mortality among the male population between the ages 20-99 years. It could also be as a result of migration of the male population from the District to other districts in the region or to other regions for educational or economic purposes.

Table 2.1: Population by age, sex and type of locality

Age Group	Sex			Sex ratio	Type of locality	
	Both Sexes	Male	Female		Urban	Rural
All Ages	121,009	59,453	61,556	96.6	39,159	81,850
0 - 4	21,224	10,784	10,440	103.3	5,744	15,480
5 - 9	21,142	10,740	10,402	103.2	6,020	15,122
10 - 14	15,257	7,955	7,302	108.9	4,945	10,312
15 - 19	12,987	6,846	6,141	111.5	4,803	8,184
20 - 24	9,537	4,419	5,118	86.3	3,508	6,029
25 - 29	8,559	3,628	4,931	73.6	2,893	5,666
30 - 34	6,863	3,037	3,826	79.4	2,375	4,488
35 - 39	5,462	2,471	2,991	82.6	1,847	3,615
40 - 44	4,403	2,015	2,388	84.4	1,493	2,910
45 - 49	3,377	1,627	1,750	93	1,225	2,152
50 - 54	2,988	1,444	1,544	93.5	1,079	1,909
55 - 59	1,566	790	776	101.8	553	1,013
60 - 64	2,093	1,031	1,062	97.1	723	1,370
65 - 69	1,217	590	627	94.1	391	826
70 - 74	1,821	839	982	85.4	685	1,136
75 - 79	892	481	411	117	312	580
80 - 84	839	379	460	82.4	306	533
85 +	782	377	405	93.1	257	525
All Ages	121,009	59,453	61,556	96.6	39,159	81,850
0-14	57,623	29,479	28,144	104.7	16,709	40,914

Figure 2.1: Population pyramid by age and sex

Source: Ghana Statistical Service, 2010 Population and Housing Census

2.3.1 Sex ratio

Sex ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females. The District recorded a sex ratio of 96.6. This implies that for every 100 females, there are about 97 males.

In most countries mortality rates for females are usually lower than that of males. Therefore, the sex ratio(s) for any population should decline from one age group to the other with advancing age. For the 2010 Census, the expected pattern of steady and gradual decline in the sex ratios is not evident but fluctuates from the age group 0-4 to 15-19. This probably is an indication of age misreporting, under enumeration or out migration of males in the various age groups.

2.3.2 Dependency ratio

Dependency ratio is the ratio of persons in the “dependent” ages (generally under age 15 and over age 64) to those in the “economically productive” ages (15-64 years) in a population (Population Reference Bureau’s Population Handbook; 5th Edition). In Table 2.1, the District has a general dependency ratio of 109.23. Males registered the highest dependency ratio of 117.7 and females 101.64. In terms of locality, the rural areas recorded the highest dependency ratio of 119.23 compared to 91.03 in the urban areas.

2.4 Fertility, Mortality and Migration

2.4.1 Fertility

Fertility is directly determined by a number of factors which, in turn, are affected by many social, cultural, economic, health, and other environmental factors. Therefore the actual reproductive performance of an individual, a couple, a group, or a population is referred to as fertility. This is different from general fertility rate which is the number of live births per 1,000 women ages 15-44 or 15-49 years in a given year (Table 2.2).

Table 2.2: Reported district distribution of total fertility rate, general fertility rate and crude birth rate

District	Population	Number of women 15-49 years	Number of births in last 12 months	Total Fertility Rate	*General Fertility Rate	**Crude Birth Rate
All Districts	2,479,461	582,897	59,391	3.54	101.9	24.0
Bole	61,593	14,471	1,663	3.8	114.9	27.0
Sawla-Tuna-Kalba	99,863	22,207	2,230	3.6	100.4	22.3
West Gonja	41,180	9,806	924	3.3	94.2	22.4
Gonja Central	87,877	20,555	2,086	3.6	101.5	23.7
East Gonja	135,450	31,216	3,071	3.6	98.4	22.7
Kpandai	108,816	24,066	2,959	4.3	123.0	27.2
Nanumba South	93,464	21,210	2,542	4.2	119.8	27.2
Nanumba North	141,584	32,246	3,143	3.4	97.5	22.2
Zabzugu	63,815	15,591	1,016	2.4	65.2	15.9
Yendi Municipal	117,780	27,686	2,355	3.0	85.1	20.0
Tamale Metropolis	223,252	59,341	4,743	2.8	79.9	21.2
Tolon	72,990	17,028	1,585	3.2	93.1	21.7
Savelugu Nanton	139,283	33,942	4,300	4.3	126.7	30.9
Karaga	77,706	18,666	1,621	2.9	86.8	20.9
Gushiegu	111,259	26,349	2,868	3.7	108.8	25.8
Saboba	65,706	14,519	1,871	4.2	128.9	28.5
Chereponi	53,394	11,652	1,495	4.3	128.3	28.0

Note: * Number of live births per 1,000 women aged 15-49 years

** Number of live births per 1,000 population

In Table 2.2, the Northern Region has a total population of 2,479,461, comprising 582,897 women aged 15-49 years. Out of the number of women registered in the 15- 49 years bracket, the East Mamprusi District recorded 27,145 women and the number of live births in the 12 months preceding the census totaled 59,391. The region recorded a Total Fertility Rate (TFR) of 3.54, General Fertility Rate (GFR) of 101.9 and a Crude Birth Rate (CBR) of 24.0.

The District recorded a TFR of 3.64 which is slightly higher than the regional average (3.54) and ranked 12th among the Districts. Zabzugu Tatale recorded the lowest TFR (2.88). By implication, the total fertility rate in 2010 in the District is 3.6 births per woman (that is 3,600 births per 1,000 women). This means women in EMD would have an average of 3.6 children each during their childbearing years.

The Table further indicates that the District has a GFR of 102.6. Saboba District recorded the highest GFR of 128.9 closely followed by Chereponi District with 128.3 with Tamale Metro scoring the least (85.0). The GFR (also referred to as the fertility rate) is the number of live births per 1,000 women 15-49 years old in a given year. The GFR is somewhat a more refined measure in that it relates births to the age-sex group at risk of giving birth (usually defined as women aged 15-49). This implies that there were 103 births per 1,000 women aged 15-49 in EMD in 2010. This is slightly higher than the regional average of 102.

Crude birth rate is the number of live births per 1,000 people in a given year. The East Mamprusi District in 2010 had a CBR of 23 lower than the regional average of 24 as in table 2.2. Savelgu Nanton scored the highest crude birth rate of 30.9 followed by Saboba District with 28.5 with Zabzugu Tatale registering the lowest with 18.8.

2.4.2 Mortality

Table 2.3 indicates that the East Mamprusi District recorded 37,404 females 12 years and older with 103,240 children ever born. This comprises 53,480 males and 49,760 females. Out of this number, 88,589 of the children ever born are surviving (45,657 male and 42,932 female).

Table 2.3: Female population 12 years and older by age, children ever born, children surviving and sex of child

Age	Number of Female	Children Ever Born			Children Surviving		
		Both Sexes	Male	Female	Both Sexes	Male	Female
All Ages	37,404	103,240	53,480	49,760	88,589	45,657	42,932

Source: Ghana Statistical Service, 2010 Population and Housing Census.

Table 2.3 reveal that the number of children ever born (1,044) to 12-14 and 15-19 years age groups indicate a high rate of teenage pregnancies in the District. Generally, there are more male children than female children ever born to women and children surviving in the District among all the age groups except 12-14 years group. In 2010, the region recorded a total of 14,715 household deaths with a crude death rate of 5.93 The East Mamprusi District recorded 619 household deaths and a crude death rate of 5.12. (Table 2.4).

Note: * Number of deaths per 1,000 population

2.4.3 Age specific death rates

Death occur within different the age groups. Death rates are therefore normally computed for specific age groups in order to compare deaths occurring at different ages or at the same age over a period of time. Figure 2.2 illustrates that the reported age specific death rate (ASDR) for the under-five is slightly higher for males than for the females. The rates among females are slightly higher compared to males among the age groups 5-39. From age group 55-59 to 65-69 ASDRs for males tend to be higher than for females.

Figure 2.2: Reported age specific death rates by sex

2.4.4 Migration

Migration is the geographic movement of people across a specified boundary for the purpose of establishing a new permanent or semi-permanent residence. Along with fertility and mortality, migration is a component of population change. The terms “immigration” and “emigration” are used to refer to moves between countries (international migration). The parallel terms “in-migration” and “out-migration” are used for movement between areas within a country (internal migration). Table 2.5 indicates that the District recorded 8,972 migrants. A total of 5,860 persons were born elsewhere in the region. For the population that was born elsewhere in the region, 25.3 percent have lived in their place of enumeration from 1-4 years and 25.2 percent have lived in their place of enumeration for twenty years or more.

A point worthy of note is that the Upper East Region (U/ER) recorded the highest number of migrants (1,369) in the District with the Western Region (W/R) recording the least number of migrants (36). The large number of migrants from the U/ER in the District may be as result of the close proximity of the Region to the District. Chieftaincy successions in the District also reveal that significant number of paramountcies, sub-chiefs and divisional chiefs are under the Mamprugu Kingdom and hence the people could easily relate to those in the EMD. Their movement into the District could also be related to pull factors such as the availability of agricultural lands, the presence of the Baptist Medical Centre (BMC) in Nalerigu and the Health Assistants Training School (HATS) as well as other sectors of employment in the District. With regards to those born outside Ghana, 529 persons were recorded with 25.3 percent staying for 20 years and more.

Table 2.5: Birth place of migrants by duration of stay at current residence

Birthplace	Number	Duration of residence (%)				
		Less than 1 year	1-4 years	5-9 years	10-19 years	20+ years
Total	8,972	22.2	24.3	13.3	14.7	25.4

CHAPTER THREE

SOCIAL CHARACTERISTICS

3.1 Introduction

There are two major types of family ties that inform household formation. These are the nuclear and extended family systems. The nuclear family is made up of the father, mother and children (adopted and/or biological). The extended family consists of the nuclear family, parents, siblings, and other relatives (Nukunya, 2003; OTHERS). The relationship becomes more complex when marital ties of all these relations, both matrilineal and patrilineal, are taken into consideration.

Closely linked to the family is the formation of households in which members are not necessarily related by blood but live together and belong to a single consumption unit. Understanding the dynamics of household is fundamental to the understanding of the characteristics of the District's population. The size of a district's population is mainly an aggregation of individual household members in the District. The size, composition, and structure of households are influenced by social, economic, and demographic factors such as age at first marriage and birth, length of time spent in school, cultural practices, occupation, material or financial abilities, capabilities of parents and couples, fertility and mortality rates, and migration.

Knowledge of household size, structure and composition offers important statistical tools for social and economic planning and the therefore provides the basis for a reasonable projection of the future size of population and planning of housing needs.

The basic objective of this chapter is to analyze household size, composition and structure using data from the 2010 Population and Housing Census.

3.2 Household Size, Composition and Structure

3.2.1 Household size

The District's total household population is 119,596. The majority 80,989 (67.7%) live in rural areas and the rest live in urban areas 38,607 (32.3%). The number of households in the District is 13,895. Of this, 5,069 (36.5%) is rural and 8,826 (63.5%) is urban. Compared to the regional figure (7.7), the average household size for the District is 8.6. Similarly, 7.6 and 9.2 are the average household size for both urban and rural localities respectively (Table 3.1)

Table 3.1: Household size by type of locality

Categories	Region	District	Urban	Rural
Total household population	2,445,061	119,596	38,607	80,989
Number of households	318,119	13,895	5,069	8,826
Average households per house	1.2	1.3	1.3	1.3
Average household size	7.7	8.6	7.6	9.2

Source: Ghana Statistical Service, 2010 Population and Housing Census

3.2.2 Household composition

Household composition refers to the patterns of relationships between the head of household and other members of the household. Table 3.2, indicates that the total household population of the District is 119,596. This is made up of 58,719 males and 60,877 females. Children (51.5%) form majority of the household population, followed by heads of households (11.6%) and other relatives (9.8%).

A higher proportion of the male household population is children (56.6%), heads of households (20.6%) and grandchildren (7.4%). Among the female household population, children (46.5%) constitute the largest proportion with spouse and other relative accounting for 17.6 percent and 14.0 percent respectively. About 12 percent of the household population is heads. The proportion of male heads (20.6%) is about seven times higher than their female heads (2.9%). It is therefore clear that household headship in the District is male dominated.

Table 3.2: Household population by composition and sex

Household composition	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	119,596	100.0	58,719	100.0	60,877	100.0
Head	13,895	11.6	12,106	20.6	1,789	2.9
Spouse (wife/husband)	10,955	9.2	272	0.5	10,683	17.6
Child (son/daughter)	61,554	51.5	33,250	56.6	28,304	46.5
Parent/parent-in-law	2,110	1.8	242	0.4	1,868	3.1

Step child	2,084	1.7	1,086	1.9	998	1.6
Adopted/foster child	661	0.6	318	0.5	343	0.6
Other relative	11,691	9.8	3,154	5.4	8,537	14.0
Non-relative	810	0.7	508	0.9	302	0.5

Source: Ghana Statistical Service, 2010 Population and Housing Census.

3.2.3 Household structure

Table 3.3 indicates that about 8 in10 of the household population live in extended family (78.2%) households while 21.8 percent live in nuclear family households. The main extended households are those comprising of head, spouse(s), children and head's relatives (62.8%), single parent extended (7.3%), extended with non-relatives (3.3%), and head and other composition but no spouse (2.9%). The nuclear family household structure is made up of head, spouse and children (18.6%), single parent nuclear (2.6%).

Table 3.3: Household population by household structure and sex

Household structure	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	119,596	100.0	58,719	100.0	60,877	100.0

Single parent Extended	8,668	7.3	4,026	6.9	4,642	7.6
Single parent Extended + non relative	659	0.6	319	0.5	340	0.6
Head and other composition but no spouse	3,505	2.9	1,853	3.2	1,652	2.7

Source: Ghana Statistical Service, 2010 Population and Housing Census.

3.3 Marital Status

Figure 3.1 presents persons 12 years and older and their marital status. The proportion of the population 12 years and older and married are 57 percent, 37 percent never married and for percent widowed.

Figure 3.1: Marital status

Source: Ghana Statistical Service, 2010 Population and Housing Census

3.3.1 Marital status, age and sex

Table 3.4 shows persons 12 years and older by sex, age-group and marital status. The population aged 12 years and older in 2010 is 71,801. 52.2 percent of males and 62.1 percent of females are married while 45.1 percent male and 28.8 percent females are never married. Less than one percent males and females respectively are divorced and less than one percent males and 6.5 percent females are widowed in the District.

Table 3.4: Persons 12 years and older by sex, age group and marital status

Source: Ghana Statistical Service, 2010 Population and Housing Census

The data also show that proportions for both males and females never married decrease with increasing age. Conversely the proportions males and females married increase with increasing age. Generally proportions widowed also increase with age, but more females compared with males are widowed especially at old ages.

3.3.2 Marital status and level of education

Table 3.5 shows that overall, out of the population 12 years and older in the District, 67.9 percent have no education, 24.2 percent have basic education, 5.8 percent have secondary education and 0.3 percent have tertiary education. A higher proportion of females (73.6%) than males (61.8%) have no education. Again, 27.6 percent and 21.0 percent of males and females have basic education respectively. Furthermore, 7.4 percent males and 4.2 percent females had secondary education while 0.5 percent males and 0.1 percent females had tertiary education. In addition, 41 percent males and 41.6 percent females never married have no education. For those married, a higher proportion of females (86.3%) than males (79.0%) have no education. Again, the proportion of widowed females (93.1%) with no education is higher than their males (86.7%) counterparts.

In terms of education, 46 percent males and 47 percent females never married have basic education. About 12.4 percent and 10.4 percent males and females respectively of the married population have basic education while 10.2 percent widowed males and six percent widowed females have basic education as indicated in Table 3.5.

Source: Ghana Statistical Service, 2010 Population and Housing Census

The Table indicates that out of 71,801 population aged 12 years and older, 41,189 (representing 57.4%) are married while 26,291(36.6%) have never married. Those living in informal/consensual union/living together (414), separated (674), divorced (552) and widowed (2,681) all together accounted for 6 percent. Of the total married population aged 12 years and older, majority (82.2%), are employed while 2.1 percent are unemployed with the rest (15.8 %) being economically not active. Among those who are never married, 58.3 percent are employed and 39.7 percent are economically not active. In terms of sex composition, more married males are employed compared to their female counterparts.

3.4 Nationality

Table 3.7 shows that Ghanaians by birth accounted for 92.8 percent of the population of the District. The proportion of the Ghanaian population with dual nationality is 2.9. Less than one percent is other nationals other than African or ECOWAS Citizens. Ghanaians by birth (92.8%) form the majority of the male population in the District and is followed by Ghanaians with dual nationality (2.7%). The same phenomenon exists for the female population which has Ghanaians by birth forming the majority (92.7%) and is followed by Ghanaians with dual nationality (3.2%).

Table 3.7: Population by nationality and sex

Nationality	Number			Percent		
	Total	Male	Female	Total	Male	Female
Total	121,009	59,453	61,556	100.0	100.0	100.0

3.5 Religious Affiliation

Religion refers to the individual's religious affiliation as reported by the respondent irrespective of whether the individual actually practiced the said faith or not. Table 3.8 shows that Islam constitute the highest percentage (58.1%) of the District's population followed by traditionalist (15.7%). Males (58.3%) and females (57.8%) account for more than half of those who practice Islam religion compared to other religions

Table 3.8: Population by religion and sex

Religion	Number			Percent		
	Total	Male	Female	Total	Male	Female

3.6 Literacy and Education

Table 3.8 presents data on population 11 years and older by sex, age and literacy status. The data clearly shows that the level of literacy is quite low. Only 33 percent (24,440) of the population of 73,993 can read and write with understanding. This indicates that 67 percent can neither read nor write. However, among those aged 11-14 and 15-19 for both male and female there are higher proportions literate than not literate. More females (72.5%) than males (61.0%) can neither read nor write in any language.

Table 3.8 presents information on literacy status of the population in the District by language in which literate. The data show that about 50 percent of the population 11 years and older and literate can read and write English Language only, 47 percent are literate in English and a Ghanaian Language and three percent in a Ghanaian Language only.

Among the literate more males, 49.2 percent compared with females 43.4 percent can read and write in English and Ghanaian language. But more females 53.2 percent than males 47.1 percent are literate in English.

3.7 School attendance and educational level, 3 years and older

The population 3 years and older in the District is 37,685 of which 20,214 are males while 17,471 are females (Table 3.9). In addition, the results show that 71.3 percent of those currently attending school are at the basic level (primary, JSS), 21.4 percent are in pre-primary and 5.9 percent in SSS/SHS. Only 1.4 is at the post-secondary level. About equal proportions of males and females are at pre-primary and basic levels but more males (6.5%) than females (5.2%) are at the SSS/SHS level. At the tertiary level males are 141 while females are 47. For those who attended school in the past 66.1 percent attended basic level while 22.3 went to SSS/SHS. Another 6.6 attended vocational/technical/commercial and post-secondary/middle institutes while 4.8 percent attained tertiary level. More females (74.7%) attended basic school compared to 59.6 percent males. However, a higher proportion of males (25.5%) compared to females 18.3 percent attended SSS/SHS/Secondary. At the tertiary level too males with 6.8 percent are more than females 2.1 percent.

CHAPTER FOUR

ECONOMIC CHARACTERISTICS

4.1 Introduction

Generally, the development of a district is based on the production of goods and services. Relevant to the production process is the human capital of the District. Although all persons irrespective of age and sex consume goods and services produced, only a section of the total population produces them: the working population often referred to as the “employed”. The type of economic activity pursued is influenced by the nature of the economy and level of socio-economic development (Hull, 2009). In sum, the larger the employed population, the more wealth is created leading to the general well-being of the population. In Ghana, over the years, a number of job opportunities have been created in the public and private sectors in a wide range of economic activities and EMD is no exception.

4.2 Activity Status

4.2.1 Population 15 years and older by activity status and sex

Table 4.1 indicates that the District recorded a total population (15 years and older) of 63,386. This comprises 29,974 males and 33,412 females. About 77 percent is economically active while 23.2 percent is economically not active. Economically active population is made up of all employed and unemployed persons of working age population (15 years or more). Economically not active population (not in the labour force) is the working age population who are neither employed nor looking for employment. (e.g. students, retired and home-makers).

Table 4.1: Population 15 years and older by activity status and sex

Activity status	Total		Male		Female	
	Number	Percent	Number	Percent	Number	Percent
Total	63,386	100.0	29,974	100.0	33,412	100.0

4.2.2 Economic activity status of population 15 years and older by sex, and age

Table 4.2 presents the economic activity status of the population 15 years and older by sex and age. About 74.5 percent of the population is employed whereas 2.3 percent are unemployed with the rest 23.3 percent being economically not active. The 45-49 age group has the highest proportion of employed population (87.9%) while 1.6 percent of the population in that age group is unemployed. On the other hand age group 15-19 has the lowest proportion of its population being employed (58.9%). With regard to the economically not active population, the 65+ age group has the highest proportion (46.3%). The age group with the lowest proportion of economically not active population is 40-44 (10.5%).

Table 4.2: Economic activity status of population 15 years and older by sex, and age

Source: Ghana Statistical Service, 2010 Population and Housing Census

In terms of sex differentials, the male population 15 years and older in the 45-49 age group has the highest proportion of employed population (93.1%). The least is 59.7 percent for age group 15-19. On the other hand the age group with the highest proportion of employed females 15 years and older is 40-44 (83.9%) with the least being 42.3(65+) age group.

4.3 Occupation

Table 4.3 indicates that over four-fifths (84.4%) of the employed population are engaged as skilled agriculture, forestry and fishery workers. Only small proportions are engaged as service and sales workers 7.1 percent and craft and related trade workers 3.9 percent. Those employed as professionals and less than one percent are employed in each of the remaining five occupational categories in elementary occupations are 1.5 percent each.

More males (88.4%) than females (80.5%) are employed as skilled agriculture, forestry and fishery workers. However, more females than males are employed as sales and service workers (10.9% females and males 3.1%) and craft and related trades workers (5.1% females and 2.5% males).

4.4 Industry

The dominance of agriculture, forestry and fishery is clearly manifested in Table 4.4. It shows that 83.6 percent of the employed are in the agricultural, forestry and fishing sector. Only low proportions of the employed are engaged in the other industrial sectors. The wholesale and retail, repair of motor vehicles and motorcycles sector employs 6.5 percent while manufacturing engages 3.2 percent. In addition accommodation and food service activities employ 1.8 percent. Proportion of males engaged in agriculture (87.6%) is higher than that of females (79.9%). However, more females compared to males are employed in wholesale and retail and repair, of motor vehicles and motorcycles (9.0% females 3.8% males) manufacturing (4.8% females and 1.6% males). Accommodation and food service activities account (3.2% female and 0.3% males) respectively.

CHAPTER FIVE

INFORMATION COMMUNICATION TECHNOLOGY

5.1 Introduction

Information and Communication Technology (ICT) has become an important tool in today's knowledge-based information society and economy. This role of ICT in an emerging economy such as Ghana has been widely recognized at various levels. This recognition is reflected in actions such as the development and deployment of a national ICT infrastructure, institutional and regulatory framework for managing the sector, promoting the use of ICT in all sectors of the economy, implementing e-governance in all government institutions and the construction of a National Data Centre as well as Regional Innovation Centres and district ICT centres across the country (GSS, National Analytical Report, 2010 PHC). In recognition of the critical role that ICT plays in the development of the country, government has embarked on the free distribution of lap tops to educational institutions and individuals in order to make the study and use of ICT accessible to Ghanaians and the East Mamprusi District as well.

To understand some of these developments a module was included in the 2010 PHC on ownership and use of ICT facilities. This chapter therefore analyses access to ICT technologies/facilities.

5.2 Ownership of Mobile Phones

This section provides information on persons 12 years and older who own mobile phones. Table 5.1 indicates that 71, 801 persons in the District are 12 years and older and 9,950 of them (about 14%) have mobile phones. Among males 18.3 percent have mobile phones compared to 9.8 percent among females.

5.3 Use of Internet

Table 5.1 shows that 572 persons 12 years and older in the District use internet facility. This means that less than one percent (0.8%) of the eligible population use internet facility. The data also show only 1.2 percent of males and less than one percent (0.4%) of females uses internet facility.

Table 5.1: Population 12 years and older by mobile phone ownership and internet facility usage and sex.

Sex	Population 12 years and older		Population having mobile phone		Population Using internet facility	
	Number	Percent	Number	Percent	Number	Percent
Total	71,801	100	9,950	13.9	572	0.8
Male	34,397	47.9	6,279	18.3	405	1.2
Female	37,404	52.1	3,671	9.8	167	0.4

5.4 Household Ownership of Desktop or Laptop Computer

Table 5.2 further indicates that 1.4 percent of the population in the District has laptop computers. Among male headed households 1.4 percent own laptop/desktop computers while 1.3 percent of female headed households own laptop/desktop computers.

Table 5.2: Households heads by sex and ownership of desktop/laptop computers

CHAPTER SIX

DISABILITY

6.1 Introduction

Persons with disabilities (PWDs) have been defined as those who are unable to or are restricted in the performance of specific tasks/activities due to loss of function of some part of the body as a result of impairment or malformation (Ghana Statistical Service, 2012).

The 1992 Constitution of the Republic of Ghana provides for the guarantee of the fundamental human rights of all persons including PWDs. In spite of this, discrimination against PWDs continues to persist in our societies.

In an attempt to appreciate the situation of PWDs as a guide for policy formulation, the Ghana Statistical Service for the first time, collected specific data on PWDs in the 2010 Population and Housing Census. This chapter discusses the population with disability, type of disability, distribution by type of locality, disability and activity status, education and literacy.

6.2 Population with Disability

Table 6.1 shows that the District has 3,855 persons with some form of disability. This constitutes 2.8 percent of the population in the District. It comprises three percent male and 2.7 percent female.

6.3 PWDs by Type of Disability

The 2010 census collected information on a wide range of disability types (sight, hearing, speech, physical, emotional, intellect and others) as depicted in Table 6.1. Other disabilities recorded the highest of 33.8 percent followed by emotion (30.4%), sight (26.7%) with the least being speech (10.6%).

6.4 Disabled by Type of Locality

The results in Table 6.1 show that the rural localities have the highest disability rate of 3.0 percent and urban account for 2.2 percent. The proportion of male population with disability in the rural areas constitutes 3.1 percent and 2.9 percent for females. In the urban areas, females with disability account for 2.1 percent and 2.3 percent for males. In the rural localities, other forms of disability constitute the highest proportion (35.5%); followed by emotional (31.3%), sight (24.5%). However, in the urban localities, sight forms the highest proportion (39.6%), followed physical (26.5%), emotional (25.3%) and hearing (19.7%).

Table 6.1: Population by disability status, type, locality and sex

6.5 Disabled by Activity Status

Information on persons PWDs (15 years and older) that are either economically active or economically not active by sex is presented in Table 6.2. Out of the total number of 65,209 persons 15 years and older living in the District, 1,500 persons are living with one disability type or more. The employed and unemployed forms 47.0 percent and 1.6 percent respectively of the total population of persons 15 years and older with disability (Table 6.2).

Table 6.2: Persons 15 years and older with disability by economic activity status and sex

Source: Ghana Statistical Service, 2010 Population and Housing Census

Of the total number of 146 persons 15 years and older with speech disability, 58.9 percent are employed, 1.4 percent is unemployed and the rest who are economically not active constitute 39.7 percent. For persons living with intellectual disability, 55.9 percent are economically not active, 40.9 percent are employed while 3.1 percent are unemployed.

In terms of sex differentials, 48.4 percent of males with disability are employed, 2.3 percent are unemployed and 49.3 percent are economically not active. For the female population living with disability, 53.5 percent are economically not active whilst 45.6 percent are employed. Hearing (59.8%) and speech (63.5%) disability account for the highest disability type in both employed males and females respectively.

6.6 Disabled and Education

Table 6.3 indicates that the District has 2,398 of her population with various forms of disability of which 72.4 have never attended school, 3.5 percent have attained pre-school education; 20.3 percent have attained basic education and 3.8 percent have attained Sec./ SSS/ SHS and higher education. For those with sight disability, 73.4 percent have never attended school, 3.6 percent have pre-school education, 20.1 percent attained basic school education and Sec. / SSS/ SHS and higher account for 2.9 percent. For those with hearing disability, two thirds (75.2%) have never attended school whilst only 2.3 percent had Sec/ SSS/ SHS and higher education.

More females than males across all types of disabilities have never attended school whilst more males (9.7%) than females (4.4%) with physical disability have attained Sec/ SSS/ SHS and higher education.

Table 6.3: Population 3 years and older by sex, disability type and level of education.

CHAPTER SEVEN

AGRICULTURAL ACTIVITIES

7.1 Introduction

The Ghanaian economy is largely regarded as agrarian due to the sector's contribution to Gross Domestic Product (GDP). However, there have been shifts in the age and sex composition of those involved in the agricultural sector over a period. For instance, there appears to be a decline in the proportion of young adult males in the agriculture labour force over the last three decades. This has resulted in a situation whereby the sector is dominated by children and the elderly. The focus of this chapter is to analyze households that are in agriculture as well as the types of farming activities these households are engaged in.

7.2 Households in agriculture

In the 2010 PHC, an agricultural household was defined as one in which at least one person in the household was engaged in farming/fishing/animal husbandry. The population of agricultural households is 12,588 out of the total of 13,895 households in the District. This translates to 90.6 percent of the total households in the District. Rural areas account for 97.4 percent of the agricultural households (Table 7.1). The high proportion of agricultural households in rural areas is basically due to fact that agriculture is essentially a rural activity. Data in Table 4.4 confirm this as 83.6 percent of population is employed in the agricultural sector.

7.3 Types of farming activities

Four types of agricultural activities were identified in the census: crop farming, tree planting, livestock rearing and fish farming. The proportion of agricultural households engaged in crop farming is 97.3 percent. This is followed by livestock rearing (71.5%), tree planting (0.4%) and fish farming (0.3%). In the urban areas, the proportion of households engaged in agriculture is 78.7 percent. Majority of households in the urban areas are also into crop farming (93.8%) and livestock (59.0%). On the other hand, 97.4 percent of rural households are engaged in agriculture. In terms of the type of agricultural activities of the households, about 99 percent are engaged in crop farming while 77.3 percent are into livestock farming.

Table 7.1: Agricultural activity of households members by locality

Agricultural activity	Total		Urban		Rural	
	Number	Percent	Number	Percent	Number	Percent
Total households	13,895	100.0	5,069	100.0	8,826	100.0

The District has 374, 977 livestock. Chicken (130,158) constitutes majority of the livestock kept followed by goats (68,611) and sheep (62,978). The numbers of persons that keep chicken are 5,750, goats 5,869 and sheep 4,933. The average number of livestock kept by

each of these keepers/owners is 17 (Table 7.2). Specifically, the average number of chicken kept per keeper in the District in 2010 is 23, goats 12 and sheep 13.

CHAPTER EIGHT

HOUSING CONDITIONS

8.1 Introduction

The 2010 Population and Housing Census captured comprehensively data on housing conditions. Among the issues covered are the number of occupied and unoccupied dwelling units, the type of dwelling and the main materials used in house construction, occupancy status, and methods of waste disposal, utilities and household facilities. Information obtained from the census on housing quality indicated by the materials used for constructing various housing units, and the availability of facilities such as water and sanitation, will serve as important indicators of the occupants' quality of life. Such information can aid the government in designing housing improvement policies by planning for housing and human settlement programmes, evaluation and monitoring of housing conditions and needs of the population within the context of the Millennium Development Goal Seven (MDG7- ensure environmental sustainability).

8.2 Housing Stock

The District has 119,596 household population and 13,895 households. The number of houses is 10,625 with an average household size of 8.6. In addition, the urban areas have a total household population of 38,607, 5,069 households with an average household size of 7.6 percent. On the other hand, the rural areas registered a total household population of 80,989. The total number of households is 8,826 with an average household size of 9.2.

Table 8.1: Stock of houses and households by type of locality

Categories	Total country	Region	District	Urban	Rural
Total population	24,658,823	2,479,461	121,009	39,159	81,850
Total household population	24,076,327	2,445,061	119,596	38,607	80,989
Number of houses	3,392,745	257,311	10,625	3,790	6,835

8.3 Type of Dwelling, Holding and Tenancy Arrangement

Table 8.2 shows that there are 13,895 dwelling units in the District. A higher proportion of households (93.8%) live in owner occupied units (owned by household member). Female headed households have lower proportion of dwelling units owned by household member (88.0%) than male headed households (94.7%). At the locality level, 97.2 percent of rural households live in dwellings owned by a household member compared with the urban (87.9%). Low proportions of dwelling units are owned by relative not household member, 2.3 percent, and other private individual 1.8 percent. But these proportions are mainly for dwellings of female headed households (5.0% and 4.0%) than male headed households (1.9% and 1.4% male headed). The results also show that the proportions for these two categories of ownership status are more of an urban than rural phenomenon.

Table 8.2: Ownership status of dwelling by sex of household head and type of locality

Ownership status	Total		Types of Locality					
	Country	Region	Total		Male headed	Female headed	Urban	Rural
			Number	Percent				
Total	5,467,054	318,119	13,895	100.0	100.0	100.0	100.0	100.0
Owned by household member	2,883,236	267,538	13,038	93.8	94.7	88.0	87.9	97.2

8.3.1 Type of occupied dwelling by sex of household head and type of locality

Table 8.3 presents information on the type of occupied dwellings by sex of household head and type of locality in the District. The proportion of compound houses (rooms) accounts for 72.3 percent, separate houses 12.3 percent and 9.4 percent for huts/buildings (same compound). Male headed households occupy 72.2 percent of compound houses, 11.1 percent of separate houses and 10.0 percent of huts/buildings. However, female headed households in compound houses account for 72.8 percent, 11.2 percent of separate houses and 5.6 percent of huts/buildings. In the urban areas, 74.3 percent of households live in compound houses, 11.2 percent in separate houses and 5.2 percent in huts/buildings. In rural areas, 71.2 percent of households live in compound houses, 12.7 percent in separate houses and 11.6 percent in huts/buildings.

Table 8.3: Type of occupied dwelling by sex of household head and type of locality

Type of dwelling	Total		District					
	Country	Region	Total		Male headed	Female headed	Urban	Rural
			Number	Percent

8.4 Construction Materials

Table 8.4 shows the main construction materials for the outer walls of dwellings by type of locality in the District. The majority (90.6%) of households live in dwellings made with mud/brick/earth. Cement block/concrete also form 2.7 percent and bamboo less than percent. In the urban areas, 86.1 percent of dwellings are constructed with mud brick/earth, 6.4 percent cement/concrete and 1.6 percent wood. However, in the rural areas, the proportion of houses with mud brick/earth is 93.3 percent, wood 2.3 percent and cement/concrete 0.6 percent.

Table 8.4: Main construction material for outer wall of dwelling unit by type of locality

Material for Outer wall	Total		District			
	Country	Region	Total		Urban	Rural
			Number	Percent		
Total	5,817,607	339,874	14,256	100.0	100.0	100.0
Mud brick/earth	1,991,540	247,754	12,920	90.6	86.1	93.3

8.4.1 Main construction materials for the floor of dwelling unit by type of locality

Table 8.5 indicates that a higher proportion for the floors of dwelling units in the District are constructed with cement/concrete (73.1%) followed by earth/mud (25.3%). Less than one percent of floor in the District are constructed from ceramic/porcelain/granite/marble tiles (0.8%). In the urban areas, 86 percent of the floors of dwellings are made of cement/concrete, 11.7 percent earth/mud and 0.8 percent ceramic/porcelain/granite/marble tiles. In the rural areas, 65.6 percent of the floors of dwellings are made of cement/concrete, 33.1 percent earth/mud and 0.7 percent ceramic/porcelain/granite/marble.

Table 8.5: Main construction materials for the floor of dwelling unit by type of locality

Material for the floor	Total		Types of Locality			
	country	Region	Total		Urban	Rural
			Number	Percent		
Total	5,467,054	318,119	13,895	100.0	100.0	100.0
Earth/mud	872,161	97,678	3,514	25.3	11.7	33.1
Cement/concrete	4,255,611	214,535	10,151	73.1	86.0	65.6

Other	15,567	1,110	46	0.3	0.5	0.2

Source: Ghana Statistical Service, 2010 Population and Housing Census

The Table therefore reveals that the use of earth/mud as construction material for floors of dwellings unit is predominantly a rural phenomenon. Again, though cement/concrete is widely used in both rural and urban areas, its use is much more common in the urban areas.

8.4.2 Main construction materials for roofing of dwelling units for roofing

The main materials for roofing dwelling units in the District are metal sheets (49.5%) thatch/palm leaf or raffia (43.0%) and mud/mud bricks/earth (3.9%). The proportion of dwellings roofed with thatch/palm leaf or raffia in the rural areas is 54.3 percent, metal sheets 37.9 percent and four percent with mud/mud bricks/earth. On the other hand, the proportion of metal sheets used for roofing in the urban areas of the District is 69.2 percent, thatch/palm leaf or raffia 23.8 percent and 3.6 percent with mud/mud bricks/earth (Table 8.6).

Table 8.6: Main construction materials for roofing of dwelling units by type of locality

Main roofing material	Total country	Region	Types of Locality			
			Total		Urban	Rural
			Number	Percent		
Total	5,817,607	339,874	14,256	100.0	100.0	100.0

8.5 Room Occupancy by Size of Household

Most households in the District use three rooms (21.1%) as sleeping rooms. While 17.4 percent use four rooms, 15.6 percent use two rooms and the use of five rooms account for 12.3 percent. Close to 7 in 10 of single person households use one room (73.5%) while 15.8 percent use two rooms (Table 8.7).

Table 8.7: Household size and number of sleeping rooms occupied in dwelling units

Household size	Number of sleeping rooms										
	Number	Percent	One room	Two rooms	Three rooms	Four rooms	Five rooms	Six rooms	Seven rooms	Eight rooms	Nine rooms or more

Source: Ghana Statistical Service, 2010 Population and Housing Census

A high proportion of households of two persons use two rooms (43.1%) followed by one room (33.3%). For household size of 10 or more, majority of them use nine rooms or more (18.5%), five rooms (17.3%), four rooms (16.8%) and six rooms (15.3%).

8.6 Access to Utilities and Household Facilities

8.6.1 Main Source of Lighting

Table 8.8 also reveals that kerosene lamp (42.6%) and electricity (mains) (38.7%) are the two main sources of lighting used by households in the District. In the urban areas, 77.5 percent of households who live in dwellings are connected to electricity mains while in the rural areas it is only 16.3 percent. Households in the urban areas (15.3%) and rural areas (58.3%) use kerosene as their main source of lighting. Solar energy is the least source of lighting used in the District accounting for less than one percent.

Table 8.8: Main source of lighting of dwelling unit by the type of locality

Main source of light	Types of Locality					
	Total country	Region	Total		Urban	Rural
			Number	Percent

8.6.2 Main source of cooking fuel for household

Table 8.9 indicates that wood (86.1%) is the main source of cooking fuel for households in the District. This is followed by charcoal (10.3%). Only one percent of households use gas in spite of the numerous campaigns to encourage its use by households. In the rural areas, wood (95.8%) is the main cooking fuel used for cooking, followed by charcoal (1.4%). On the other hand, in the urban areas the proportion of households using wood for cooking is 69.2 percent and charcoal 25.8 percent.

8.6.3 Cooking space used by household

Table 8.9 also shows that 35.4 percent of households have separate rooms for exclusive use whereas 28.7 percent cooks in open space in compound. A quarter (25.4%) also cooks under enclosure without roof. The proportion of households in the urban areas that have a separate room for exclusive use of their household cooking is 42.2 percent, while 23.4 percent cook in open space in compound and 17.7 percent cook in enclosure without roof. On the other hand, in the rural areas, 31.6 percent of households cook in separate rooms for exclusive use, 31.8 percent cook in open space in compound and 29.8 percent in enclosure without roof.

8.7 Main Source of Water for Drinking and for other Domestic Use

8.7.1 Main source of drinking water for household

Bore-hole/pump/tube well (36.8%) and river/stream (23.4%) are the main sources of drinking water for households in the District. Urban households (27.9%) and rural households (41.9%) use bore-hole/pump/tube as their main source of drinking water. In addition, a relatively high proportion of urban households use pipe borne water (32.8%) as their main source of drinking water compared to 1.0 percent of rural households.

8.7.2 Main source of water for other domestic use of household

Bore-hole/pump/tube well (33.6%) and river/streams (28.8%) are the main source of water for other domestic use by households. Pipe born water is also used by a relatively high proportion of urban households (30.1%) compared to rural households (1.1%). In the urban areas the proportion of households (17.9%) using river/stream is less than rural households (35.0%). Tanker supply/vendor provides water for only 0.2 percent of the entire district.

8.8 Bathing and Toilet Facilities

8.8.1 Toilet facility used by household

Table 8.11 reveals that majority of households have no toilet facilities (use the bush/beach/field) (86.0%), while 5.8 percent use public toilet (WC, KVIP, Pit, Pan etc) and 4.3 percent use KVIP. The proportion of households in the urban areas that have no toilet facilities is 70.5 percent, those using public toilet is 14.2 percent and 8.9 percent relies on KVIP. On the other hand, 94.8 percent of households in the rural areas have no toilet facilities, 1.9 percent use pit latrines and 1.6 percent uses KVIP.

8.8.2 Bathing facility used by household

Table 8.11 indicates that 36.3 percent of the households have bathrooms for their exclusive use, 30.1 percent shares separate bathrooms in the same house and 16.9 percent uses shared open cubicle. In the urban areas, 39.9 percent of households have their own bathroom for their exclusive use, 33.5 percent share separate bathrooms in the same house and 13.8 percent

share open cubicles. In the rural areas, 34.2 percent have bathrooms for their exclusive use, 28.2 percent share separate bathrooms in the same house and 18.7 percent share open cubicles.

8.9 Method of Waste Disposal

8.9.1 Solid waste

Table 8.12 shows the methods of solid and liquid waste disposal in the various localities in the District. It reveals that 37.9 percent of households in the District dispose of their solid waste using public dumping sites (open space) whilst 30.4 percent dump their solid waste indiscriminately and 15.0 percent burn their solid waste. The proportion of households in the rural areas that dump their solid waste indiscriminately is 41.1 percent, 34.3 percent use public dumping sites (open space) and 14.7 percent burn their solid waste. In the urban areas, 44.4 percent practice public dumping (open space), 18.8 percent use public dump (container) and 15.5 percent burn their solid waste.

8.9.2 Liquid waste

Majority of households throw their liquid waste onto the street or outside (71.1%) whilst some also throw onto the compound (14.0%) and others use drainage into a pit or soak away (5.2%). In the urban localities, the proportion of households that throw their liquid waste onto the street or outside is 74.4 percent, while 7.5 percent throw onto the compound with the rest 7.3 percent disposing of their liquid waste through drainage into a pit. In the rural parts of the District, 69.1 percent of households throw their liquid waste onto the street or outside, 17.8 percent threw onto the compound and 4.0 percent use soak away.

Table 8.12: Method of solid and liquid waste disposal by type of locality

CHAPTER NINE

SUMMARY OF FINDINGS, CONCLUSION AND POLICY IMPLICATIONS

9.1 Introduction

The East Mamprusi District is one of the oldest districts in the Northern Region and has Gambaga as its capital. It covers a land mass of 1,706.8 square kilometers, representing about 2.2 percent of the total land mass of the Northern region.

9.2 Political and Administrative Structure

The East Mamprusi District is by Law, the highest political, administrative and planning authority with deliberative, legislative and executive powers. Chieftaincy plays an important role in the social and political organization of the people.

9.3 Economy

The East Mamprusi District is richly endowed with natural resources. The District has three functional markets at Gbintiriu, Nalerigu and Langbinsi. Agriculture is the mainstay of the economy with crop farming and livestock rearing as important agricultural activity. The main means of transportation for the people are motor bikes, bicycles as well as commercial vehicles.

9.4 Summary of Findings

9.4.1 Socio-demographic characteristics

The 2010 PHC shows that the total population of the East Mamprusi District is 121,009, comprising 59,453 males and 61,556 females. This translates into 49.1 percent males and 50.9 percent females. About 67.6 percent of the population resides in rural areas. Children less than 15 years old constitute 47.6 percent of the entire population of the District. The District has a sex ratio of approximately 97. The structure of the population pyramid shows a youthful population structure with a broad base consisting of large numbers of children and a conical top of a small number of elderly persons.

The District's total household population is 119,596. The majority 80,989 (67.7%) live in rural areas and the rest live in urban areas 38,607 (32.3%). The number of households in the District is 13,895. Of this, 5,069 (36.5%) is rural and 8,826 (63.5%) is urban. Children (51.5%) form majority of the household population. The proportion of male (20.6%) heads is about seven times their female counterparts (2.9%).

The extended family system is widely practiced in the District as about 8 out of every 10 of the household population live in extended family households.

9.4.2 Fertility

The total fertility rate in 2010 in the District is 3.6 births per woman. This means women in EMD would have an average of 3.6 children each during their childbearing years.

9.4.3 Literary and education

Only 33 percent (24,440) of the population of 73,993 can read and write with understanding. This indicates that 67 percent can neither read nor write. However, among those aged 11-14 and 15-19 for both male and female there are higher proportions literate than not literate. More females (72.5%) than males (61.0%) can neither read nor write in any language.

The level of educational attainment of the population 3 years and older who have ever attended school is 66.1 percent. Basic education (primary 38.6%, JSS 19.2% and middle 8.3%), 22.3 percent second cycle education (SSS/SHS 17.3%, secondary 5.0%) and 4.8 percent tertiary level.

9.4.4 Nationality

The District is largely inhabited by Ghanaian nationals (92.8%). However, nationals from neighboring countries (Cote d'ivoire, Burkina Faso and Togo) are also found in the District. Ghanaians by birth (92.8%) form the majority of the male population in the District. Female population by birth similarly forms the majority (92.7%) of the Districts population.

9.4.5 Religion

More than half, (58.1%) of the population practice Islam religion. Males (58.3%) and females (57.8%) also account for more than half of those who practice Islam religion compared to other religions

9.4.6 Economic activity

The District recorded a total population (15 years and older) of 63,386. Of this 77 percent is economically active while 23.2 percent is economically not active. Furthermore, 74.5 percent of the population is employed whereas 2.3 percent are unemployed with the rest 23.3 percent being economically not active.

9.4.7 Occupation

Skilled, agriculture, forestry and fishery serve as the major occupation of the inhabitants of the District (84.4%). More males (88.4%) than females (80.5%) are employed as skilled agriculture, forestry and fishery workers. However, more females than males are employed as sales and service workers (10.9% females and males 3.1%) and craft and related trades workers (5.1% females and 2.5% males). The private informal sector employs majority (96%) of the employed population in the District.

9.4.8 Information Communication Technology

Mobile phone usage in the District is very low. The data show that about 14 percent of the population in the District has mobile phones while only 0.7 percent of households. Again, the proportion of persons who use internet facility in the District is less than one percent (0.5%). The proportion of males who use internet facilities 1.2 percent is almost 3 times their female counterparts (0.4%). In terms of laptop ownership, 1.4 percent of households own laptop computers.

9.4.9 Disability

The District has 3,855 persons disability. This constitutes 2.8 percent of the population in the District. Other disabilities recorded the highest of 33.8 percent followed by emotion (30.4%), sight (26.7%) with the least being speech (10.6%). In the urban areas, females with disability

account for 2.1 percent and 2.3 percent for males. In the rural localities, other forms of disability constitute the highest proportion (35.5%).

9.4.10 Agriculture

Households in the District are largely engaged in agriculture (90.6%). However, agriculture in the District is mainly a rural activity (97.4%). A higher proportion of agricultural households are into crop farming (97.3%), while a significant proportion is also into livestock rearing (71.5%).

9.4.11 Housing conditions

The District has 10,625 houses with an average household size of 8.6. There are 13,895 dwelling units in the District. Majority of the dwellings are owner occupied or owned by a household member (93.8%). High proportion of dwelling units is compound in nature (72.3%). The material for construction of dwellings in the District is mainly mud brick/earth which accounts for 90.6 percent. In addition, about 73 percent of the material for the floor of dwellings is cement/concrete. A large proportion of the materials for roofing of dwelling units in the District are metal sheets (49.5%).

About 39 percent of households in the District depend on national electricity grid for power. Therefore, power supply to the population in the District is highly inadequate since a greater number of the households still depend on kerosene (43%) for light.

The main source of household's drinking water (36.8%) and for other domestic uses (33.6%) in the District is Bore-hole/Pump/Tube. However, wells, rivers/streams are also used by 23.4 percent and 28.8 percent of households for drinking and other domestic use respectively in certain parts of the Districts particularly in the rural areas.

In the area of sanitation, majority of households in the District has no toilet facilities (86.0%) hence use of the bush/beach/field with their attendant problems. Only 5.8 percent use public toilet (WC, KVIP, Pit, Pan, etc.) and 4.3 percent use KVIP.

Waste disposal has been identified to be a great challenge to the people in the District. Data on solid waste disposal in the various localities in the District reveal that 37.9 percent of households use public dumping sites (open space) while 30.4 percent dump their waste indiscriminately.

9.5 Policy Implication

The consequences of these indicators are critical and must therefore be given priority in the development planning process of the District. Educational and health infrastructure such as classroom blocks and Community Health Planning Services (CHIPS) compounds must be urgently provided to take care of the education and health needs of the children as well as the aged especially in the rural areas where a greater number (40,914) of the children and the aged (3,600) reside. Employment opportunities must also be created to absorb the unemployed youth.

In addition, the proportion of the aged population is quite significant. There is the need to adopt innovative measures to tap into their experiences to move forward the development of the District and Ghana as a whole. However, policies and programmes that already exist for the well-being of the aged population should be enhanced. For example, care facilities for the aged in the communities should be provided (see UNPD (Ghana), 2007). Policy options for

this segment of the population will have to include enhancement of social support systems of various kinds, both formal and informal, as well as employment opportunities for the elderly who are still capable of working.

Programmes that promote female education and women's empowerment should be intensified. This will ensure that females are enrolled and retained in school to realize their full potential so that they can contribute to the development of the District. In the light of this, the District Assembly (DA) in collaboration with other development partners should endeavour to implement policies and programmes geared towards the realization of these objectives.

With regards to sanitation, the DA should incorporate in their District Medium Term Development Plan (DMTDP) the construction of public toilets in communities across the District in order to curb the indiscriminate open defecation and its attendant health problems. The DA should provide waste bins to households and containers for public dump sites to ensure proper disposal of solid waste.

The DA should also intensify the rural electrification project. This would ensure that many communities are hooked onto the grid to enjoy the benefits that come with it.

Wood is used for cooking by a large proportion of households (69.2%) urban and (95.8%) rural. Continued reliance on wood will ultimately lead to deforestation. The District should educate households to grow wood lots for fuel and also encourage afforestation and use of natural gas.
